

UNITED STATES  
SECURITIES AND EXCHANGE COMMISSION  
WASHINGTON, DC 20549

FORM 8-K

CURRENT REPORT PURSUANT  
TO SECTION 13 OR 15(d) OF THE  
SECURITIES EXCHANGE ACT OF 1934

Date of report (Date of earliest event reported): April 5, 2021

**BIO-PATH HOLDINGS, INC.**  
(Exact name of registrant as specified in its charter)

**Delaware**

(State or other jurisdiction  
of incorporation)

**001-36333**

(Commission File Number)

**87-0652870**

(IRS Employer Identification No.)

**4710 Bellaire Boulevard, Suite 210, Bellaire, Texas**

(Address of principal executive offices)

**77401**

(Zip Code)

(832) 742-1357

(Registrant's Telephone Number, Including Area Code)

(Former Name or Former Address, if Changed Since Last Report)

Check the appropriate box below if the Form 8-K filing is intended to simultaneously satisfy the filing obligation of the registrant under any of the following provisions:

- Written communications pursuant to Rule 425 under the Securities Act (17 CFR 230.425)
- Soliciting material pursuant to Rule 14a-12 under the Exchange Act (17 CFR 240.14a-12)
- Pre-commencement communications pursuant to Rule 14d-2(b) under the Exchange Act (17 CFR 240.14d-2(b))
- Pre-commencement communications pursuant to Rule 13e-4(c) under the Exchange Act (17 CFR 240.13e-4(c))

Securities registered pursuant to Section 12(b) of the Act:

Title of each class	Trading Symbol	Name of each exchange on which registered
Common Stock, par value \$0.001 per share	BPTH	The Nasdaq Capital Market

Indicate by check mark whether the registrant is an emerging growth company as defined in Rule 405 of the Securities Act of 1933 (§230.405 of this chapter) or Rule 12b-2 of the Securities Exchange Act of 1934 (§240.12b-2 of this chapter).

Emerging growth company

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act.

## **Bio-Path Holdings Announces Successful Completion of Safety Cohort of Triple Combination of Prexigebersen, Decitabine and Venetoclax in Stage 2 of Phase 2 Clinical Trial in Acute Myeloid Leukemia**

**HOUSTON – April 5, 2021** – Bio-Path Holdings, Inc., (NASDAQ:BPTH), a biotechnology company leveraging its proprietary DNAbilize® antisense RNAi nanoparticle technology to develop a portfolio of targeted nucleic acid cancer drugs, today announced the successful completion of the safety run-in of the Stage 2 of the Phase 2 clinical study of prexigebersen (BP1001), a liposomal Grb2 antisense, for the treatment of acute myeloid leukemia (AML), in combination with frontline therapies, decitabine and venetoclax, in acute myeloid leukemia (AML) patients. The safety run-in of Stage 2 of the Phase 2 clinical trial was comprised of six evaluable patients who were treated with the triple combination of prexigebersen, decitabine and venetoclax.

“We are particularly pleased with the clean side effect profile and lack of toxicity shown in this segment of the study, as our Phase 2 efficacy segment will include *de novo* fragile AML patients for whom drug side effect profiles are particularly important. We are also very encouraged by the efficacy signals shown in this dataset, with five of six evaluable relapsed, refractory and newly diagnosed AML patients demonstrating clinical activity. These positive signals give us further confidence in the potential for this program in these late-stage and compromised patients,” stated Peter H. Nielsen, Chief Executive Officer of Bio-Path Holdings.

“We look forward to advancing this Phase 2 study, as we believe its unique design provides us with several definable registration pathways. We believe that prexigebersen, with its promising efficacy and safety profile, has the potential to be an ideal combination candidate with frontline therapies,” concluded Mr. Nielsen.

In the safety run-in, six evaluable patients were treated with the combination of prexigebersen, decitabine and venetoclax. These patients included four relapsed/refractory AML patients, and two newly diagnosed AML patients. In the preliminary safety data review, five of the patients (83%) responded to treatment, including four (67%) achieving complete response (CR) and one (17%) complete response with incomplete hematologic recovery (CRi). CR rates to combination treatment with decitabine and venetoclax for relapsed/refractory AML patients is 42-52%<sup>1,2</sup> and 0-39%<sup>1,2</sup> for relapsed/refractory secondary AML patients. Response rates to frontline treatment decitabine and venetoclax for newly diagnosed AML patients is 62-71%<sup>3,4</sup>. These preliminary data showed the treatment was well-tolerated and there were no dose limiting toxicities attributed to prexigebersen. Three patients remained on treatment for more than one cycle.

Stage 2 of the Phase 2 clinical trial has three treatment cohorts, which the Company believes provides for several potential regulatory pathways. The first two cohorts will treat patients with the triple combination of prexigebersen, decitabine and venetoclax. The first cohort includes newly diagnosed AML patients and the second cohort includes relapsed/refractory AML patients. Finally, the third cohort treats relapsed/refractory AML patients who are venetoclax resistant or intolerant with the two-drug combination of prexigebersen and decitabine.

The Phase 2 clinical trial continues with 21 patients currently enrolled across all three cohorts. Enrollment of 19 patients in each cohort should enable a data review to determine if there is a comparative increase in efficacy versus the decitabine and venetoclax combination therapy sufficient to support petitioning the FDA for approval to switch to breakthrough therapy for accelerated approval. The Phase 2 trial will be conducted at up to ten clinical sites in the U.S. For more information on the Phase 2 study, visit [www.clinicaltrials.gov](http://www.clinicaltrials.gov).

---

**About Bio-Path Holdings, Inc.**

Bio-Path is a biotechnology company developing DNAbilize<sup>®</sup>, a novel technology that has yielded a pipeline of RNAi nanoparticle drugs that can be administered with a simple intravenous transfusion. Bio-Path's lead product candidate, prexigebersen (BP1001, targeting the Grb2 protein), is in a Phase 2 study for blood cancers and prexigebersen-A, a drug product modification of prexigebersen, is under consideration by the FDA to commence Phase 1 studies in solid tumors. This is followed by BP1002, targeting the Bcl-2 protein, where it will be evaluated in lymphoma and solid tumors clinical studies.
